

Latticework trunking

ABSTRACT

Trunking comprising a bottom and two lateral flanges, consisting of rigid lengthwise wires and rigid crosswise wires, the crosswise wires being fixed to the lengthwise wires on the inside of the trunking. The lengthwise wires belonging to the bottom of the trunking each consist of a succession of longitudinal portions connected by bends protruding away from the interior volume of the trunking, the bends of the lengthwise wires being designed to accommodate the crosswise wires and being sized so that the crosswise wires and the longitudinal portions of the lengthwise wires lie at the same level.
